

## IOSH Risk Assessment in Practice

### 1-day course

#### Aim

To provide delegates with a comprehensive introduction to health and safety roles, responsibilities and risk assessments. Workplace risk assessments are a legal requirement under UK law, so it is essential that you have somebody on-site who is trained to carry out the procedure.

This is an IOSH accredited course which will involve passing a 30-minute assessment based on multiple choice questions.

#### Objectives

By the end of this course you will be able to:

- Carry out, record & review straightforward risk assessments in the workplace
- Identify when specific or more complex risk assessments are required
- Know the main legal requirements for risk assessment & control
- Hazards, risks & basic principles of risk assessment
- Understand the principles of prevention & identify suitable measures to remove or control significant risks

#### Course description

A bewildering range of Acts of Parliament, Regulations, Approved Codes of Practice and Guidance Notes form the framework of Health & Safety Compliance in the UK. A number of well-publicised prosecutions, civil actions and government initiatives are increasingly focussing attention on the human and financial cost of non-compliance – no one can afford to ignore these, from the Board downwards.

This intensive and comprehensively documented course provides up-to-date guidance for all levels, irrespective of the size of the organisation.

#### Course content

##### ***Full documentation and assessment checklists provided***

We show you how to evaluate and manage risks in your workplace in line with working practices and procedures as required by the Management of Health & Safety at Work Regulations 1999.

#### Programme

0930 Introduction

The History of Assessment through UK H&S Legislation
